

**System® Root
Flush Technology**

System® VT powered by Symspray®

System® VT is a specialty formulated foliar fertilizer containing potassium, calcium, magnesium in a phosphite form as well as boron all powered by Symspray® to help maximize grain fill and mitigate heat or plant stress. System® VT is designed for pre-tassel use on corn and pre or early bloom on other crops to meet the peak nutrient demand timing to maximize kernel weight and mitigate heat or plant stress.

Guaranteed Analysis

Soluble Potash (K₂O) 10.0%
Calcium (Ca) 1.0%
Boron (B) 0.15%
Magnesium (Mg) 0.7%

Derived From

Potassium Hydroxide, Boric Acid, Calcium Carbonate and Magnesium Carbonate

Package Sizes

2.5, 250 and bulk

System® VT Advantages

- System® VT powered by Symspray® rapidly delivers potassium, calcium, boron and magnesium
- Improves yield potential, plant health, quality and helps mitigate plant stress
- Compatible with most NPK nutritional products, fungicides, insecticide and herbicides
- System® Root Flush Technology; creates a larger and more robust root system due to the rapid intake and quick translocation of nutrients in System® series product line. These root systems are better able to access more moisture and soil nutrients to help maximize yields and mitigate stress.
- Powered by Symspray®: Symspray® is a biological growth enhancer to help plants relieve environmental stress to maximize seed development and/or pod fill

Crop	Recommended Rate	Application Timing	Application Method
Corn	3 pts	**V10 – VT	Ground, air and fertigation
Soybeans	3 pts	R1 - R3	Ground, air and fertigation

** up to 5 days after full tassel

System® Series - All nutrients in Agro-K's System® Series product lines are linked to a phosphite ion for rapid absorption and movement within the plants
