Directions for Commercial Use:

This product must only be used for corrections of deficiencies as determined by foliar and soil testing. Apply 2.5-7.5 L/Ha (1-2 L/acre). This product should be applied based on the advice of a professional agricultural consultant. For best results, spray in the early morning or late afternoon. Do not apply during the “sunlight” hours when air temperature is above 30°C. Only minor amounts of nutrients applied to foliage are absorbed by plants. Foliar treatments therefore supply only a portion of the three major nutrients (nitrogen, phosphorus and potassium) required for successful plant production. Such a product is recommended only for use as a supplementary source of plant nutrients to a basic fertilizer program that relates to the fertility level of the soil.

Potassium Finishing Solution is compatible with many fertilizers and pesticides but a compatibility check is recommended. Always ensure adequate dilution in the spray tank before adding Potassium Finishing Solution to any mixture. Never mix Potassium Finishing Solution in a concentrated form with other fertilizers or pesticides. Do not mix Potassium Finishing Solution with pesticides that are sensitive to high pH solutions.

FIRST AID:

IF IN EYES: Flush with plenty of water and get medical attention or contact poison control centre.

IF ON SKIN: Wash with soap and water.

IF INGESTED: Get medical attention or contact poison control centre.
