Science-Driven NutritionSM

© 2020 Agro-K Corporation.

Agro-K has developed the CLEAN product line of certified organic inputs to help growers meet their crop's nutritional demands throughout the season. Agro-K's CLEAN product line contains a full range of nutrient products that have been formulated to maximize foliar nutrient fertilizer performance. Organic farmers can now let science driven nutrition, instead of limited product selection, guide them in how to best apply the 4 R's – Right nutrient, in the Right form, at the Right time and in the Right mix.

Successful farmers are applying the principles behind the 4 R's of plant nutrition to their fertility programs. They understand the need to maximize fruit quality, packout, and return on investment. Product selection and nutrient forms have limited the organic farmer's ability to apply the 4 R's of plant nutrition. In the past unfortunate compromises have been made to fertility programs that have hurt fruit quality and profits. The need for compromise is over!

Agro-K's CLEAN organic products and tailored, science-based programs can meet or exceed the efficacy of common conventional based nutrients and programs. In the replicated independent trial shown in the chart, Agro-K's full season organic nutrient program grossed an additional \$4,090/ac compared the grower's conventional nutrient program and the untreated control by almost \$7,000.
