BioMax O.C. is designed for compatibility with ortho and poly-phosphate based starter fertilizers blends. Many micronutrient and soil amendments are not compatible with phosphate based fertilizers resulting in nutrient tie up and tank sediment problems. BioMax O.C. is intended to supplement and enhance a full ground fertility program.

Directions for Commercial Use:

Ground apply BioMax O.C. at a rate of 1 to 2 quarts per acre. BioMax O.C. can be pre-blended with starter fertilizers prior to application. BioMax O.C. can be ground applied or injected through most irrigation systems including drip and center pivots. If ground applying, ensure that BioMax O.C. is incorporated into the soil within two weeks after application, either mechanically or with sufficient water to wet soil to a depth of 1 inch. If you have any questions regarding mixing or application rates contact your Agro-K dealer before using this product.

Notice:

Do not put BioMax O.C. through sub-surface irrigation tape that has been pre-treated with herbicides. Do not mix BioMax O.C. with pre-emergent herbicides or apply over the top of a pre-emergent herbicide within 2 weeks of that herbicide application.
