

Clean-Iron is designed for use on all crops to correct iron deficiencies. Proper nutrient management will help maximize crop quality and yield. Foliar fertilization is intended to supplement standard ground fertility programs and will not by itself provide all nutrients normally required by agricultural crops.

Directions for Commercial Use:

FOLIAR: Apply 1 to 8 pints per acre with sufficient water for thorough coverage. Repeat every 10-14 days as needed.

SOIL: Apply 1 to 4 quarts per acre. Product can be applied through irrigation systems or sprayed on the soil and watered in. Repeat every 10-14 days as needed.

APPLICATION PRECAUTIONS: Avoid applying to wet leaf and fruit surfaces. Apply to dry plant surfaces to the point of wet with no run-off. Avoid spraying at temperatures above 85 degrees at time of application during day light hours. Do not apply to fruiting crops between bloom and 6 weeks after petal fall, under cold or slow drying conditions.

MIXING: Clean-Iron may be mixed with most fertilizers, insecticides and/or fungicides. A compatibility check is recommended. Check with your field representative for specific recommendations.

Information regarding the contents and levels of metals in this product is available on the internet at <http://www.aapfco.org/metals.html>
